Title: Bench box 12 V converter

Size: A3	Date: 2026-11-06	**Rev: draft 0.1**
KiCad E.D.A. 10.0.6		Id: 1/2

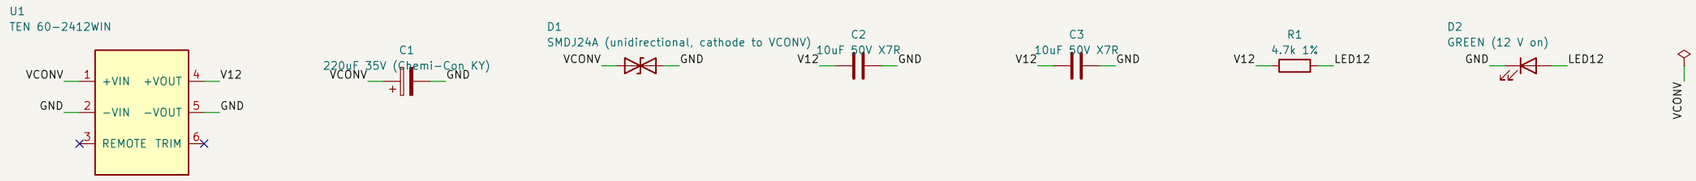

INPUT: the 12–21 V rail from the charger board (SYS OUT, through the rocker). XT30 pin 2 = square end = +

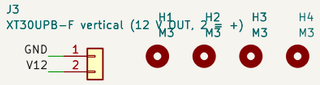

FUSES: Keystone 3568 holders for MINI (ATM) blade fuses, plugged in from the top. 5 A to the hub, 10 A to the converter (TRACO: 10 A fast)

CONVERTER TRACO TEN 60-2412WIN with its datasheet input parts (220 uF KY || TVS) and 10 uF X7R output. TVS SMDJ24A instead of TRACO's SMDJ58A: this rail never exceeds ~21 V, and 24 V clamps below the 50 V surge rating

OUTPUT and MOUNTING: 12 V 5 A to the H5 (XT30 lead to its 5.5 / 2.1 barrel plug); four M3 holes 4 mm in from the corners

Every pin is connected by net labels; KiCad ERC + check.py verify connectivity
